

Start with caps meshed and the Preselector dial at the left-most mark. Tie one end of the dial cord to the spring at "1" and Begin to wind, following the numbers. You will make one complete turn around the tuning shaft ring Before moving to the capacitor ring. You will also criss-cross the dial cord around the capacitor shaft as shown. Loop the free end of the dial cord through the open end of the spring at "20", and pull to place some tension on the cord. Tie off.

Sources for Dial Cord:

High quality kite string, woven nylon, NDT cotton.

Shoe repair shop - heavy nylon thread.

Deep-sea fishing Bait and Tackle shops. - Look for the woven, heavy line you used to see on Bait-casting reels.

30LB fly line leader.
